Vol. 7 No. 9, May 2-15, 1981

John W. Severinghaus, professor of Anesthesia and CVRI has been named the 24th Annual Faculty Research Lecturer. He will speak on "pH and All That" Monday, May 18 at 4 p.m. in Cole Hall. The selection of the Faculty Research Lecturer represents the highest recognition by the faculty of scientific achievement at UCSF.

Severinghaus is regarded as one of the world's leading authorities on the problem of high altitude sickness. He and his co-workers have made major contributions to the pathophysiology, diagnosis and care of the chronic respiratory cripple.

Most recently, he has returned to the use of oxygen and CO_2 electrodes in order to look through the skin at capillary blood and noninvasively read the gas tensions. The enormous potential of such methods in medical diagnosis and management is as yet only partially understood.

UCSF is sponsoring several events to help people safeguard and improve their health as part of "National Hospital Week," May 10 to 16. Events will include free lectures, classes, blood pressure screenings, and competitive athletic events. (A schedule of the activities is listed on the inside calendar). T-shirts, "Caring for your Future" buttons, door prizes and gift certificates will be given away at many of the events. A self-scoring healthstyle quiz, calendar of events, and a list of campus resources for health promotion will be mailed soon to each employee.

In addition, a booth will be set up in the Medical Sciences lobby each day to distribute information on rape prevention, health hazard appraisal, the cancer risk analysis service and stress management. A complete schedule of the week's activities also can be obtained at the booth or by contacting Linda Civitello, x3206. The program is sponsored by Hospitals and Clinics and the Office of Public Service Programs.

15 FRIDAY

NEWS BRIEFS

A new UCSF laboratory devoted to research on diseases of the liver was officially opened in April at SFGH. The facility, called the Rice Laboratory, was built with the aid of a bequest to the university from the estate of the late John Edward Rice of Los Angeles, as a memorial to his parents, William and Mary Ann Rice.

Rice Laboratory director, Montgomery D. Bissell says the facility will conduct basic research on the function of the liver, with particular attention to a study of liver cells to determine how they are affected by diseases such as hepatitis and cirrhosis.

The laboratory is part of the UCSF Liver Center, one of only two such liver centers in the country. The center is funded by the NIH to promote collaborative research on the function and diseases of the liver.
